May 2026 to Present: Independent Developer (Unpaid), FIFA World Cup 2026 Match Prediction & Betting Analytics

Independently designed, built, and maintain an end-to-end machine learning pipeline predicting international football match outcomes, using a dataset of over 50,000 international matches dating back to 1872. Currently migrating the pipeline's data infrastructure to Microsoft Fabric.

- Achieved 59.4% three-class prediction accuracy on held-out 2018 and 2022 World Cup data, exceeding the 33% random baseline, by engineering 27 features including Elo ratings and weighted form.
- Diagnosed and resolved a production authentication failure caused by a mid-migration change to Microsoft Fabric, by tracing the root cause through the pipeline's automated retraining process and rebuilding its secrets handling, publicly documented at github.com/RrePitso.

Jan 2026 to Present: Founder & Lead Developer, iDelivery, University of Fort Hare

Independently built a WhatsApp Business API-based food delivery coordination system for the University of Fort Hare community, using a Node.js backend and a Google Sheets-based data store. The customer-facing flow is live and connected via WhatsApp; the driver flow currently runs against a test number.

- Built and deployed a working, WhatsApp-based delivery coordination system end-to-end, handling live customer interactions through a Node.js backend.
- Validated the driver-side workflow through a dedicated test number ahead of full deployment, and laid the groundwork for automated restaurant notifications as the next feature to ship.

Dec 2025 to Present: Software Developer / Full-Stack Engineer, P&C Solutions

Contracted as a remote full-stack developer for P&C Solutions, responsible for building the company's public-facing website and developing full-stack web applications for client engagements, collaborating directly with the CEO, designers, and client representatives across the full software development lifecycle.

- Built and deployed P&C Solutions' public-facing company website, contributing directly to an increase in client enquiries and new business leads.

Sep 2026 to Oct 2026: Data Science Intern (Unpaid), Oasis Infobyte

Completed the Oasis Infobyte Summer Internship Program (SIP) on the Data Science track, which required a minimum of 3 of 5 assigned tasks; independently completed all 5, each built and documented as a public GitHub project with an accompanying demonstration video.

- Completed all 5 assigned Data Science tasks, exceeding the programme's minimum requirement of 3, spanning classification, regression, and NLP: Iris Flower Classification, Unemployment Analysis, Car Price Prediction, Email Spam Detection, and Sales Prediction.
- Published each task as a documented, public GitHub project under a structured naming convention.

Sep 2026: Software Developer, CAPACITI AI Productivity Assistant, CAPACITI Tech Accelerator

Selected for CAPACITI's intensive, one-week Tech Accelerator programme, covering enterprise IT business principles and applied AI integration. Engineered a full-stack productivity platform using Next.js, Supabase, Tailwind CSS, and LLM APIs, built throughout using an agent-assisted workflow: directing an AI coding agent to draft implementation, then reviewing, testing, and verifying every change before it shipped.

- Built a role-based platform automating cohort metrics, administrative communication, and task scheduling, by directing and rigorously reviewing agent-generated code rather than trusting it outright.
- Earned the Google AI Essentials Professional Certification and completed a formal SAQA-accredited assessment (Unit Standard 114050) in the same week.

Jun 2026 to Sep 2026: Systems Development & Data Specialist, Dynamic DNA (DVT Group / MICT SETA)

Selected for a competitive, government-sponsored scarce-skills data academy within the Dynamic Technologies (DVT) group, engineering enterprise-grade cloud data architectures and analytical models within the Microsoft Azure ecosystem.

- Earned Microsoft Certified: Azure Data Fundamentals (DP-900) and Microsoft Certified: Fabric Data Engineer Associate (DP-700) by completing structured Azure and Fabric training alongside academy project work.

Feb 2023 to Present: BSc Computer Science (Mathematics Major), University of Fort Hare

Followed a full-time course of study in Computer Science with a Mathematics major, covering programming, data structures and algorithms, database management, software engineering, computer networks, operating systems, and advanced mathematics. Coursework complete; final examination on 27 October 2026.

- Achieved distinction-level results (85%+) in three first-year modules, including Introduction to Computing and Programming Concepts, by building strong foundational programming logic.
- Achieved a distinction (76%) in Operating Systems by applying strong systems-level programming understanding in third year.

Jan 2015 to Dec 2019: Matric, Science Stream, A.B. Phokompe Senior Secondary School

Completed secondary schooling in the Science stream, with a curriculum emphasising Mathematics, Physical Science, and English.

- Ranked as Top 2 Matriculant in graduating class by achieving an overall average above 81%.
